

- Breast cancer
- Gastric cancer
- Chromosomal and microsatellite instability in colorec
- Osteoblast differentiation and related diseases
- muscle structure development
- mitotic cell cycle process
- transcription, DNA-templated
- enzyme-linked receptor protein signaling pathway
- PID PS1 PATHWAY
- NABA SECRETED FACTORS
- hematopoietic or lymphoid organ development
- cell population proliferation
- NABA CORE MATRISOME
- regulation of DNA-templated transcription, initiation
- positive regulation of protein phosphorylation
- Adipogenesis
- positive regulation of cell migration
- Signaling by GPCR
- skeletal system development
- cellular response to organic cyclic compound
